

Terms of Reference: **Senior Research Fellow- Qualitative Research**

WHO WE ARE

HERD International is a dynamic national organization, dedicated to generate evidence using science and technologies and promote evidence informed policies and practices for sustainable development in health, education, environment and social sectors to improve quality of life. We work closely with various stakeholders at local, provincial, national and international level.

HERD International is conducting multiple research projects with focus on strengthening the health systems at national and sub-national level. Through building resilient capacities of local governments, these projects aim at improving access and delivery of basic health care services that are of quality, effective, responsive and gender-equitable, in fragile settings in Nepal.

Therefore, HERD International is seeking a Senior Research Fellow – Qualitative Research as a member of central team, to lead and contribute to management and analysis functions of multiple qualitative research projects.

WHAT WE EXPECT

The Senior Research Fellow-Qualitative Research will work as one of the full-time senior members of Research Department of HERD International, stationed in head office - Kathmandu, expected to lead and manage qualitative health research projects under the guidance of Managing Director and Qualitative Research Lead. The scope of the position is accomplishment of the stated key end-results by providing strategic leadership/team management and professional expertise in study design, data generation, data monitoring and management, analysis and write up.

Key responsibilities of the Senior Research Fellow are as follows:

Core technical functions

1. Under the guidance of Qualitative Research Lead, contribute in design and implementation of qualitative research projects
2. Lead the development of field guides and other data collection related materials and approaches
3. Conduct qualitative data collection applying various qualitative methods including participatory approaches, with frequent field visits and working closely with community
4. Perform qualitative data management and analysis using different analytical methods and frameworks (using or adapting existing ones or creating new), including application of gender and intersectionality framework
5. Use qualitative data analysis software such as Nvivo in routine analysis work
6. Engage in recruitment process and training of researchers on technicalities of qualitative approaches to create a common level of understanding about research priorities and standards within the team to generate quality evidence using designed tools and techniques
7. Provide routine guidance and mentoring support to team members to execute research activities

8. Coordinate and liaise with project partners (both national and international) for effective implementation of the study
9. Represent organisation in different qualitative research related national and international meetings and platforms
10. Contribute to the development of detail implementation plan of projects, ensuring alignment with project impact pathway, log frame and indicators and ensure routine monitoring and documentation of project activities focusing on timeliness and quality
11. Engage with Monitoring and Evaluation team to develop and implement a monitoring, evaluation and learning strategy by developing theory of change, log frame and indicators to track progress of the projects
12. Make frequent field trips to ensure timely completion of quality data collection in coordination with research team as per research protocol and activity schedule
13. Ensure confidentiality, anonymity and security of project data adhering to the ethical standards
14. Support Qualitative Research Lead in development and routine update of institutional strategies and guidelines related to qualitative research
15. Lead development of regular reports (progress report, activity reports, and final project reports based on requirements of funding agencies and others) in coordination with other research team
16. Contribute to knowledge translation and capacity development of team through in-house training and workshops in data generation, management and analysis and writing
17. Engage with communication team and research team to communicate research findings and produce scientific papers for publications in national and international journals
18. Ensure internal communications through electronic and physical meetings with project core teams to share progress and challenges
19. Coordinate with government and other partners to facilitate smooth functioning of study activities
20. Undertake any other task as required by the organization

Organizational Management and Leadership

1. Contribute ideas and be innovative for the creation and continuation of efficient professional team
2. Lead team and contribute to develop and strengthen human resource capacity in qualitative research
3. Contribute to an effective roll-out of HERD International's programme planning, implementation and monitoring activities in coordination with other respective units
4. Provide strategic inputs in performing result-based achievement in order to ensure value for money
5. Facilitate to create synergies between and within teams and their members and key stakeholders/partners working with HERD International
6. Line manage and mentor colleagues as per the organization guideline
7. Contribute towards the development and growth of HERD International by contributing in vision-setting, policy formulation, strategy development, process review and program evaluation

Communications and Working Relationships

1. Co-ordinate monthly meetings with field-based and central team to communicate research and administrative matters
2. Ensure monitoring and documentation of progress with regular reports to HERD International central office team
3. Ensure open communication channels so that all emails, correspondences and activities are well informed by/to project team
4. Work in close coordination with Managing Director, Operations and Support unit, ICT, Research Uptake and Communications, Research and Programme team members in HERD International central office
5. Support to communicate with relevant partners and/or responsible persons to share or correspond relevant information regarding the research projects
6. Communicate with concerned staff of different level of government agencies and other related I/NGOs and stakeholders for project implementation, as needed
